Oncology Rehabilitation Suite

The Buckeye Cruise for Cancer Oncology Rehabilitation Suite at the Stefanie Spielman Comprehensive Breast Center provides physical therapy intervention for complications resulting from cancer and its treatments. The result is improved survivorship at any stage of the cancer journey. In the exceptional space, the team helps survivors manage:

- Management and early detection interventions of Lymphedema
- Impaired mobility (deconditioning, weakness, loss of flexibility and balance)
- Post-operative return to function
- Peripheral neuropathy and joint pain, two common chemotherapy-related side effects
- Cancer-related fatigue
- Physical well-being during any phase of cancer survivorship
