Thermo Scientific TSQ Altis Triple-Stage Quadrupole Mass Spectrometer

The Thermo Scientific TSQ Altis Triple-Stage Quadrupole Mass Spectrometer analyzes massive amounts of information contained within a person's cells.

This cutting-edge technology offers researchers—most notably those who focus on detecting and treating cancer cells—unparalleled ability to analyze the most complex molecules and to detect cancer at its earliest stage.

This robust scientific tool will enable the world-renowned cancer experts at the OSUCCC – James to improve cancer diagnosis, prognosis and treatment.
